

THE MONTCLAIR BIRD CLUB

QUIZ 162

November 13, 2022

What is New Jersey's most common austral migrant? (Austral migrants are birds that breed in the southern hemisphere and winter far north of their nesting areas.)

Link to ponder: An early scientist in the [Delaware Valley](#).

THE ANSWER IS ON THE NEXT PAGE

Wilson Storm-Petrel

The Wilson storm petrel breeds in the Antarctic, then moves north to spend its winter—our summer—in the north Atlantic. It is abundant off the coast of New Jersey from late May to late September, but is only rarely seen from land.
