

THE MONTCLAIR BIRD CLUB

QUIZ 193

June 18, 2023

Why do you never see magnificent frigatebirds floating on the sea like pelicans and gulls? When do they rest?

Link to ponder: Small birds fighting [infection](#).

THE ANSWER IS ON THE NEXT PAGE

Magnificent frigatebird feathers are not waterproof.

Frigatebirds soar over warm oceans with 7-foot wingspans and may stay aloft for months. They will dip down to the water and grab a fish near the surface. They are also adept at hitting other birds, forcing them to drop their prey. The frigatebird will then retrieve the dropped prize from the water surface below.
