

THE MONTCLAIR BIRD CLUB

QUIZ 161

November 6, 2022

What long-legged snail-eater moved north into Oklahoma, Missouri, Kansas, Nebraska, Iowa Illinois, and Wisconsin in summer 2022?

Link to ponder: [Birds of the first Americans.](#)

THE ANSWER IS ON THE NEXT PAGE

Limpkin

The limpkin is a tropical bird typically found only as far north as Florida, but its range has been expanding rapidly. Over the past two summers, the species has been recorded for the first—and probably not the last—time in a number of new localities far to the west and to the north of its historical range.
